

# Oil Contamination

## Monitoring System

The oil contamination monitoring system offered by us is used for on-line measurement of contamination in Hydraulic oil and gives direct output in terms of CLASS OF CONTAMINATION as per ISO 4406 or NAS 1638.

### The system consists of :

- Contamination sensor CS 1320 of HYDAC
- Inlet/outlet connections with flow control valve
- Power supply module with cable
- Printer and its allied circuit

All the above items are arranged inside Aluminium case for ease of carrying.  
The above items available as kit or as separate components as per your requirement.

### The salient features of the system are:

- Direct display of Class of contamination as per ISO/NAS
- Printout of the result
- Option for data storage
- Option for USB connection for connecting to laptop
